

Conventional Approach

Is **self-verification strategy** used in the response when solving this math problem?

The **self-verification strategy** is used 2 times in this response. It appears when the phrase "Wait" ...

Rigid Analysis

- ❌ Limited to predefined criteria
- ❌ Analysis doesn't provide practical guidelines for model improvement

CoT Encyclopedia (Bottom-up)

What **strategies** are used in this response and what strategies should the LM use to get it correct?

The response employs a **self-verification strategy** based on [...] and also takes a **top-down approach** [...]

Flexible Analysis

Analysis data accumulated from other problems

Exploring multiple approaches instead of **repeatedly verifying** calculations could improve accuracy by 4%

Guidelines to improve the LM

Classifier

- ✅ Can automatically identify criteria tailored to the problem
- ✅ Recommends reasoning strategies based on past success/failure data from similar problems
